

SARAH JENKINS

Principal AI Architect | Lead Agentic Engineer

Seattle, WA • +1 555 019 8472 • sarah.jenkins.ai@email.com • linkedin.com/in/sarah-jenkins-ai

SUMMARY

Principal-level engineering and product leader with over two decades of experience architecting distributed, enterprise-grade systems and 3+ years specifically dedicated to building large-scale agentic AI solutions. Specialized in multi-agent orchestration architectures, autonomous AI workflows, and advanced Retrieval-Augmented Generation (RAG) ecosystems for customer-facing applications. Proven ability to bridge deep technical complexity with product strategy, driving feature adoption, engagement, and conversion while mentoring high-performing AI engineering teams.

CORE SKILLS

Agentic Systems: Multi-agent orchestration & coordination, LangGraph, Agent-to-Agent (A2A) protocols, Stateful AI memory architectures (short-term context, long-term user memory), Advanced prompt engineering, Model fine-tuning & evaluation.

AI & ML Ecosystems: CrewAI, Semantic Kernel, Interruptible Voice Agents, Conversational AI frameworks, PyTorch, TensorFlow.

Software Engineering: Python, JavaScript (Node.js), TypeScript, Java, Microservices Architecture, API-First Design.

Cloud Platforms: AWS (Bedrock, SageMaker), Azure AI Studio, GCP Vertex AI, Enterprise RAG pipelines, Vector Databases.

EXPERIENCE

Principal AI Architect

January 2021 – Present

NexaCloud Solutions

Seattle, WA

- Architected a modular AI ecosystem deploying specialized agents as microservices, utilizing a structured Agent-to-Agent (A2A) protocol alongside a custom MCP server for secure tool-calling into legacy enterprise platforms.
- Developed a multi-agent collaboration framework featuring specialized validation guardrails and an "LLM-as-judge" agent setup. Improved initial output accuracy from 89% to 99% through iterative tiering and self-correction loops.
- Engineered an LLM-powered marketing automation suite for automated content generation, dynamic lead scoring, and intelligent categorization/escalation of inbound customer communications.
- Led the technical assessment and strategic roadmap for modernizing a core enterprise policy platform, delivering over 450 functional enhancements via strict release governance and change management.
- Designed stateful AI workflows using LangGraph, implementing robust memory management that preserves real-time conversational context as well as long-term customer preference profiles.

Senior Enterprise Consultant

August 2016 – December 2020

Vertex Consulting Group

Chicago, IL

- Spearheaded modernization initiatives migrating legacy mainframe applications to modern cloud architectures. Orchestrated data pipelines to successfully migrate over 12,000 enterprise accounts and associated records.
- Transformed over 250 legacy reporting structures into optimized, real-time Tableau and Power BI visualization suites, applying advanced UX principles to drastically improve operational visibility for C-suite stakeholders.
- Directed a cross-functional engineering team to unify business operations from three distinct divisions onto a singular platform, developing 60+ RESTful services and utilizing MuleSoft to migrate 900,000+ data artifacts securely.
- Architected zero-downtime deployment strategies and robust fault-tolerant pipelines during a massive data migration project encompassing roughly 65 million individual file assets.

Software Integration Engineer

March 2012 – July 2016

Synergis Technologies

Portland, OR

- Modernized roughly 60 internal applications from legacy procedural languages to scalable, cloud-ready frameworks, drastically improving system performance and concurrent user capacity.
- Optimized data journaling and big data analytics utilizing Hadoop and MapReduce frameworks, successfully compressing data processing cycles from 2.5 hours down to 12 minutes.

KEY AI & ENGINEERING PROJECTS

- **Custom MCP Integration:** Developed a proprietary Model Context Protocol (MCP) server enabling specialized AI agents to securely query real-time financial APIs and generate dynamic charting/visualizations for market analysis.
- **Proprietary EVAL Framework:** Engineered a rigorous AI evaluation and benchmarking system to score emerging LLMs against internal safety, hallucination, and accuracy thresholds prior to production deployment.
- **Algorithmic Trading Agent:** Built an autonomous real-time market analysis agent capable of identifying historic price action patterns, generating predictive models, and proposing systematic trade entries.
- **Multi-Modal Content Moderation:** Created an automated content moderation pipeline leveraging Google's multimodal analysis models, integrated into an agentic workflow to autonomously review and flag video and image assets.

- **Secure PKI Chat Network:** Architected a decentralized web platform utilizing Public Key Infrastructure (PKI) for cryptographic token-based member verification, securing private enterprise communications.
- **Enterprise Copilot Scaling:** Driven the organizational rollout of GitHub Copilot to over 500 developers by engineering a centralized governance framework, enforcing VS Code guardrails and automated compliance checks.

VOLUNTEER EXPERIENCE & LEADERSHIP

Founder & Lead Organizer

November 2023 – Present

AI For Tomorrow

Seattle, WA

- Founded an educational non-profit focused on democratizing AI knowledge for K-12 students, conducting free foundational workshops for over 400 community participants.
- Designed an autonomous, multi-agent voice synthesis system to script, produce, and narrate weekly educational tech podcasts, utilizing dual-host AI voices to engage a community of 600+ listeners.
- Frequent speaker and panelist at regional AI tech meetups, including the Pacific Northwest AI Collective, AI Tinkerers, and local LangChain developer communities.

Founding Contributor

May 2023 – Present

OpenAgent Initiative

Remote

- Architected complex, stateful autonomous agents leveraging modern React frontends for a decentralized AI research collective.
- Established a formal peer-review protocol for prompt engineering and red-teaming, utilizing iterative stress-testing to refine how models handle edge-case interactions.

EDUCATION & CERTIFICATIONS

Master of Business Administration (MBA)

Graduated: 2021

University of Washington

Master of Science in Computer Science

Graduated: 2011

Georgia Institute of Technology

AWS Certified Solutions Architect – Professional

Issued: 2022

Amazon Web Services
